DETAILED ACTION

Claim Rejections - 35 USC § 112

1. Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 3 recites the limitation "the data" in line 3. There is insufficient antecedent basis for this limitation in the claim. However, in light of similarly worded claim 2, "the data" is understood as complex I and Q data obtained by mixing the signal down to 0 Hz, for the purpose of examination.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Koslov et al (US 5,940,450).

Koslov et al discloses (see Fig.3) a method of estimating a carrier frequency of a phase-modulated signal (see col.1, lines 18-20) which is known to take "the form of a pulse train of phase jumps of a predetermined size such that an integer multiple of phase jumps equals 2π radians," comprising;

a) extracting the pulse train from the signal (see col.2, lines 40-41 describing Equalized Symbols, i.e., "the pulse train"),

Art Unit: 2634

- b) making an initial estimate of the carrier frequency (see col.2, lines 44-49 describing ROM 114 generating an initial estimated carrier frequency),
- c) estimating an error in the initial estimate (see col.6, lines 23-42, describing the generation of a frequency error),
- d) using the error to generate a more accurate estimate of the carrier frequency (note that the error is used to adjust the initial carrier frequency to a more accurate one) and
- e) repeating steps c) and d) until an estimate of the carrier frequency having a desired accuracy is calculated (note that the carrier frequency adjustment is in a feed-back loop, thereby repeating the steps c) and d)).

Allowable Subject Matter

4. Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claims 3 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2634

Hu et al (Us 6,704,344) and Hanna et al (US 6,269,118) teach a carrier recovery from a phase modulated signal.
